DropX

Gamified Web3 Rewards Ecosystem

DropX is a task-based engagement platform where real user activity is tracked, verified, and rewarded with $DPX tokens. Built for Web3 projects seeking authentic community growth — and users who want to earn meaningfully through participation.

The Problem With Web3 Airdrops

The current airdrop model is fundamentally broken. Projects distribute tokens without verifying real engagement, bots harvest rewards at scale, and genuine community members are left unrewarded. This misalignment damages project credibility and user trust across the ecosystem.

Bot-Driven Distribution

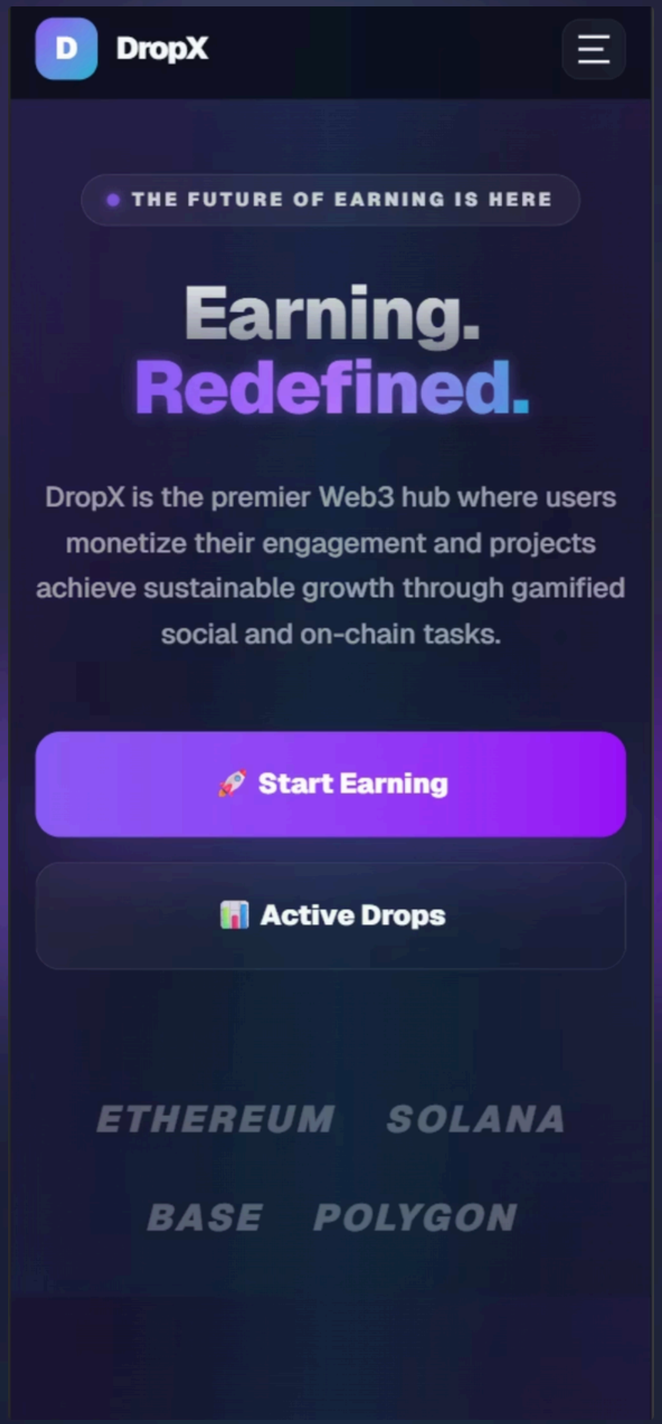
Sybil attacks and automated scripts dominate airdrop claims, draining token supplies before real users can participate meaningfully.

No Engagement Verification

Projects cannot distinguish genuine community members from reward farmers, resulting in low-quality user bases and poor retention.

No Structured Reward Path

Users lack a consistent, transparent system to earn through participation — engagement is either unrewarded or arbitrarily distributed.



The DropX Solution

DropX replaces broken airdrop mechanics with a structured, verifiable engagement layer. Users complete meaningful tasks, projects receive authentic participation data, and rewards are distributed through a transparent on-chain system powered by $DPX.

Task-Based Participation

Users complete structured tasks — social actions, on-chain activity, referrals — each verified before rewards are issued.

Real Activity Tracking

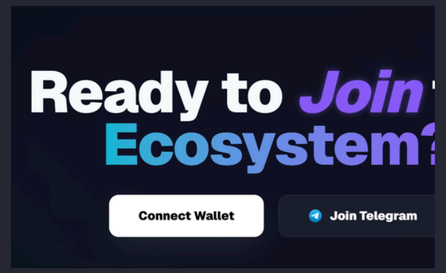
DropX tracks genuine user behavior, filtering out bots and ensuring only verified participation qualifies for rewards.

Engagement → Rewards

Every verified action converts into $DPX rewards, creating a direct and transparent link between participation and earnings.

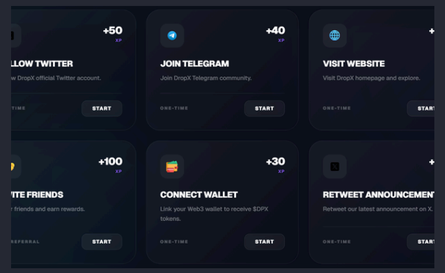
Product Overview

DropX features a clean, task-driven interface built for Web3-native users. The platform centers on wallet-connected participation, a structured task system, real-time reward tracking, and a live leaderboard — all accessible through a unified dashboard.



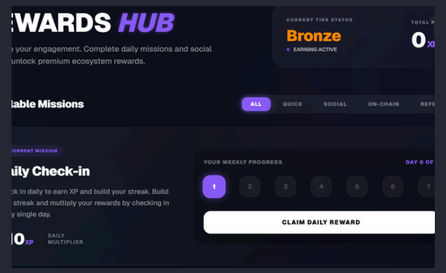
Wallet Connection

Seamless Web3 wallet integration connects users to the DropX ecosystem, enabling on-chain identity verification and reward distribution.



Task System

A structured task feed allows users to browse, accept, and complete participation activities — each verified before rewards are issued.

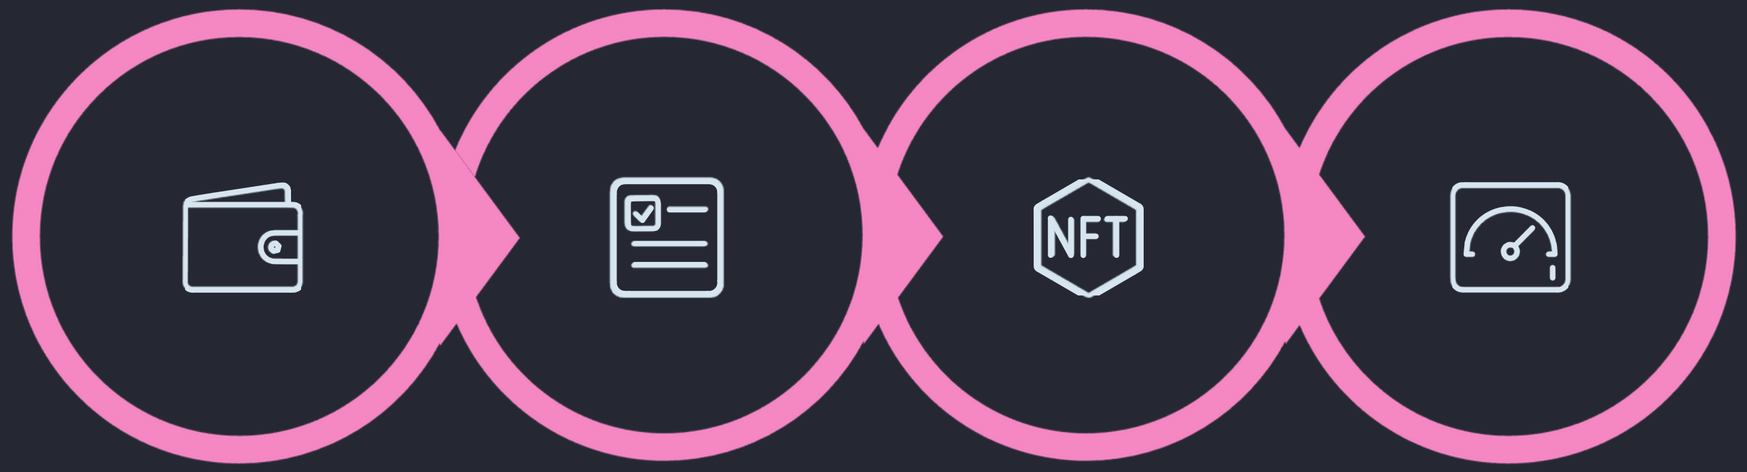


Rewards & Leaderboard

Users track earned $DPX, monitor task progress, and compare rankings on a live leaderboard within a unified dashboard.

How DropX Works

DropX operates through a simple four-step loop that converts user participation into verifiable on-chain rewards. The process is designed to be frictionless for users while maintaining integrity for project partners.



Connect Wallet

Complete Tasks

Earn $DPX

Track Progress

The entire flow is wallet-native — no centralized accounts, no manual claims. Once a task is verified, $DPX rewards are attributed directly to the user's connected address.

The $DPX Token

Token Overview

Symbol: $DPX

Utility: Core rewards currency within the DropX ecosystem — earned through task completion and participation.

Network: ERC-20 (Ethereum) / BEP-20 (BNB Chain)

Total Supply: 1,000,000,000 $DPX

Token Utility

- Reward distribution for verified task completion
- Incentive layer for user engagement and retention
- Ecosystem currency for platform participation
- Foundation for future DropX utility expansion

Tokenomics, contract address, and network details will be disclosed prior to TGE. No speculative figures are presented at this stage.

Market Opportunity

Web3 projects consistently struggle to acquire and retain genuine community members. DropX sits at the intersection of three high-demand categories — each representing a significant and growing addressable market.

Web3 Engagement Platforms

Projects need structured ways to drive and measure authentic user participation. Existing tools are fragmented, bot-vulnerable, or lack on-chain verification.

Airdrop Distribution Systems

The airdrop market is multi-billion dollar, yet distribution infrastructure remains primitive. DropX offers a verifiable, task-gated alternative to blind token drops.

Community Growth Tools

Web3 communities require scalable engagement infrastructure. DropX provides a repeatable system for onboarding, activating, and rewarding community members.

Roadmap

DropX is progressing through a clear, milestone-driven development path. Each phase builds on verified platform performance and community feedback. Specific timelines will be confirmed as development progresses.

1

Platform Launch

Core DropX platform goes live with wallet connection, task system, and dashboard fully operational.

2

Task System Live

Full task infrastructure deployed — projects can create, manage, and verify participation activities at scale.

3

Reward System Active

$DPX reward distribution goes live. Users earn tokens for verified task completion across the platform.

4

Ecosystem Expansion

Future expansion includes new integrations, partner projects, and enhanced platform utility. Details TBD.

Community & Ecosystem

DropX is built on a community-driven growth model. User participation is the core engine — every task completed, every referral made, and every reward earned strengthens the ecosystem. DropX grows when its users grow.
